Fraud Investigations & Disruption

REPLICA
POWERED BY GREY MARKET LABS

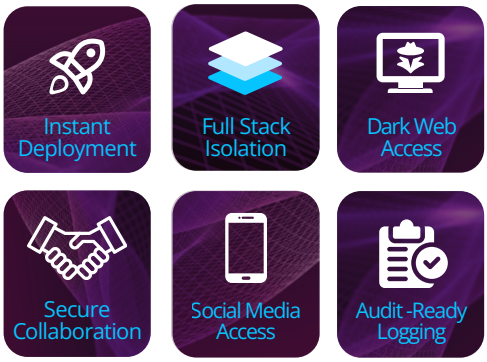
Replica Isolated Environments

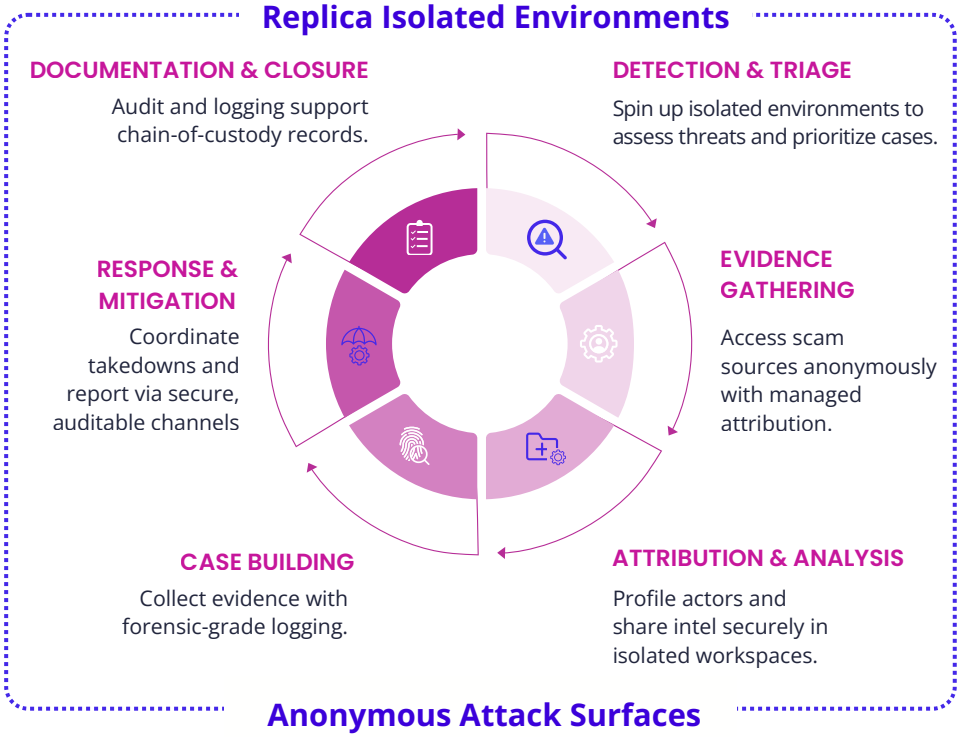
Instant. Secure. Frictionless

Enterprise-Scale Digital Fraud Detection and Response Operations

Fraud and digital risk teams face mounting pressure—from impersonation scams and social engineering to geo-blocked content, mobile-restricted platforms, telephony-based scams, and compliance hurdles. Organizations are seeking streamlined and secure access to critical data, enabling faster action, broader reach, and stronger protection against evolving threats.

Replica provides comprehensive computing environments built for fraud operations, enabling fast, secure, cross-border investigations with trusted attribution control, instant deployment, and assured operational safety.





Business Challenge

Unlocking Speed and Access in Fraud Response

Fraud teams face fast-moving digital threats but are constrained by limited access and legacy security processes. Investigators resort to shadow IT—burner devices, VPNs, personal accounts—creating attribution risks, compliance violations, and operational inefficiencies.

As fraud schemes grow across social platforms and geo-restricted content, organizations need real-time investigation and disruption capabilities with identity protection, security, and speed to action.

Current State Limitations:

- Reliance on unauthorized or shadow IT, and improvised solutions
- Lack of variety in IT limits data access (Geo-blocked, mobile-only, dark web)
- Insufficient collaboration capabilities for cross-team and sector data sharing
- Limited visibility and audit fails to oversight or compliance needs
- Lack of protections put investigators and teams at high risk

REPLICA™
POWERED BY GREY MARKET LABS

Replica Isolated Environments

The Solution

Replica delivers secure, scalable, and fully isolated environments purpose-built for fraud investigations and digital risk disruption. Teams gain trusted access to geo-restricted content, impersonation networks, mobile-only social channels, telephony services, and other high-risk platforms—protected by attribution control and infrastructure-level security. With digital identity control, secure collaboration, and enterprise-grade auditability, Replica accelerates investigation response times and drives comprehensive fraud disruption at speed and scale.

Key Benefits

Access Illicit Marketplaces
Explore fraud forums & dark markets

Anti-Fraud Honey Pots
Lure and study adversary behavior

Mobile & Telephony Access
Secure access to apps, calls, SMS, MMS...

Automated Data Collection
Collect stolen credentials at scale

Empowering Investigators

Replica gives fraud investigators unrestricted access to hard-to-reach information for faster case resolution, and seamless collaboration, enabling comprehensive evidence collection and stronger cases while working safely and efficiently at enterprise scale.

The Replica Advantage

Infrastructure Protection
Anonymous attack surface protects analysts and infrastructure via pixelated streaming—no code execution, no exposure, fully authentic online presence.

Attribution Control
Flexible networking and digital identity controls enable investigators to access fraud ecosystems while maintaining operational cover.

Enterprise Capabilities
Connect to existing workflows with API-ready environments and Butler™, Replica's secure file transfer and data management system.

Comprehensive Audit & Compliance
Enterprise-grade forensic logging, including PCAP, DNS resolution, and screen recording with chain of custody controls and real-time management oversight.

Built by Former Intelligence Professionals
Replica was born from decades of cyber counterintelligence experience. Every capability is rooted in operational tradecraft proven in the most sensitive missions.
