

The Replica Platform

Secure Environments for High-Stakes Work

Instant. Isolated. Frictionless

Organizations conducting high-stakes digital activities face a persistent challenge: traditional security solutions are incomplete, inefficient, and unreliable.

Traditional workarounds like VPNs, isolated browsers, and manual VM stacks are high-friction and leave signatures. They require long implementation times, limit technical access, and force teams to choose between speed and security. Mailing physical burner hardware or relying on unmanaged personal devices for AI testing creates unacceptable risk and cost.

Replica replaces these fragmented tools with instant, full-stack isolated workspaces. We provide a dedicated, secure home for high-risk activities, allowing your team to test AI, investigate threats, or collaborate with third parties without ever touching or exposing your corporate network. When your work introduces risk, or you don't want lurkers observing, Replica keeps you protected.

Uncompromising Security for Unmatched Velocity.

Replica provides on-demand isolated environments forged from elite intelligence tradecraft. Built by practitioners for practitioners, our platform empowers teams to instantly provision secure, full stack workspaces for high-stakes digital missions, from AI experimentation to global threat intelligence, without ever exposing users or your primary corporate network to risk.

Protected by 21 patents, Replica delivers managed attribution and full-stack isolation that scales effortlessly from 5 to 10,000+ users. Safely integrate high-risk workflows into your existing security ecosystem with enterprise-grade observability, absolute anonymity, and zero infrastructure friction.

Key Capabilities

INSTANT READINESS

Provision full-stack isolated workspaces in under 10 minutes. Eliminate the logistical burden of burner hardware and IT provisioning delays, allowing you team to move at the speed of the mission.

HARDWARE-LEVEL ISOLATION

Protect your primary network with full-stack virtualization that leaves zero footprint on the host device. Our 21 patents ensure that even the most high-risk activities remain completely segmented from your enterprise infrastructure.

MANAGED ATTRIBUTION

Execute sensitive OSINT and threat research with a patented anonymous attack surface. Mask your organization's identity and intent while accessing restricted digital channels, the dark web, and closed forums.

ENTERPRISE OBSERVABILITY

Replace black box silos with total visibility. Feed real-time telemetry and comprehensive audit trails directly into your existing security ecosystem.

Secure, Unrestricted Access, and Complete Control

From Fortune 500 companies to government agencies, organizations rely on Replica to accelerate important work that traditional solutions slow down or block entirely.

Our platform enables digital operations across business acceleration and organizational security—enabling teams to operate quickly and efficiently without compromising protection.

AI & Development Sandboxes

Safely red-team models and experiment with emerging AI without the risk of Shadow AI or IP leakage. Accelerate innovation in a sanctioned, secure environment that eliminates production risk.

Third-Party Collaboration

Provision secure clean rooms for M&A due diligence and partner integrations. Collaborate on sensitive operations anonymously without exposing internal systems, strategy, or proprietary data.

Threat Operations

Investigate active threats and conduct OSINT research anonymously across digital channels—protected by a patented, invisible attack surface that hides your intent and infrastructure.

Malware & Dark Web

Execute risky digital missions with managed attribution. Analyze malicious code and investigate dark web threats without leaving a digital fingerprint or risking system compromise.

The Replica Advantage

Rapid Deployment

Bypass traditional hardware procurement and IT backlogs. Launch fully virtualized instances instantly via an agentless architecture that scales from five to thousands of users.

Managed Attribution

Research, analyze threats, and access restricted content while maintaining complete privacy.

Secure Collaboration

Govern data using policy-driven boundaries. Maintain absolute control over file transfers, preventing cross-contamination while safely integrating third-party tools into your workflow.

Audit & Compliance

Bridge the gap between isolation and oversight. Stream comprehensive session logs and activity metadata directly into your existing security suite for monitoring.

Replica is the secure environments platform for high-stakes work. It enables organizations to safely innovate, investigate, and collaborate in full isolation while protecting their data and systems. With comprehensive observability and data controls, Replica helps teams move fast, reduce security exceptions, ensure compliance, and accelerate critical initiatives.
